

PYTHON TUPLE PROGRAMS WITH OUTPUT

1. Tuple of Strings – Accessing Elements

PROGRAM:

```
# tuple of strings
my_data = ("hi", "hello", "bye")

# displaying all elements
print(my_data)

# accessing first element
print(my_data[0])

# accessing third element
print(my_data[2])
```

OUTPUT:

```
('hi', 'hello', 'bye')
hi
bye
```

2. Tuple with Different Data Types – Negative Indexing

PROGRAM:

```
my_data = (1, 2, "Kevin", 8.9)

# accessing last element
print(my_data[-1])

# accessing third element from the end
print(my_data[-3])
```

OUTPUT:

```
8.9
2
```

3. Nested Tuple – Indexing

PROGRAM:

```
my_data = (1, "Steve", (11, 22, 33))

# accessing character 'v'
print(my_data[1][3])

# accessing 22
print(my_data[2][1])
```

OUTPUT:

v

22

4. Iterating Over a Tuple

PROGRAM:

```
# tuple of fruits
```

```
my_tuple = ("Apple", "Orange", "Grapes", "Banana")
```

```
# iterating over tuple elements
```

```
for fruit in my_tuple:
```

```
    print(fruit)
```

OUTPUT:

Apple

Orange

Grapes

Banana
